# Excavate Safely Work with Precision

Non-destructive excavation  
with AirSpade Vac®

## Go Anywhere. Excavate with Control.

Move quickly from job to job with a compact, truck-ready system designed for controlled, non-destructive excavation. The AirSpade® Vac delivers powerful spoil removal while helping protect roots, utilities, and underground infrastructure. Pair it with AirSpade tools to create a complete excavation system that improves efficiency without sacrificing precision or safety.

## AirSpade Vac® Vacuum Excavator

Engineered for rugged performance and reliable operation, the AirSpade Vac delivers high-powered excavation with the control required for sensitive underground work. Operating from a standard 185 cfm tow-behind compressor, it features an 11 cu. ft. (82-gallon) tank, durable all-aluminum construction, and a high-performance venturi vacuum with no moving parts to wear out.

Designed for trenching, potholing, and keyholing, the AirSpade Vac supports safer excavation by enabling efficient debris removal while maintaining precise control around roots and buried utilities—helping crews work faster while reducing risk and protecting critical infrastructure.
